

Maths – The Olympics

This year we were supposed to compete in another Olympic Games but it was postponed due to Covid-19. You're now going to look back at the 2016 Olympics and the results for New Zealand and England, who both take part in the in Olympic Games.

Use this website <https://www.olympic.org/rio-2016> to look at the 2016 medal table, and fill out this table.

	Gold	Silver	Bronze	Total
New Zealand				
England				

Then use this table to help you to create a bar graph. Remember to label your graph.

If you were to decide upon the winner out of New Zealand and England based on the number of gold medals, who would win?

How do you feel about using the total number of medals to decide upon which country is placed first or not?

You are going to use this website <https://www.olympic.org/rio-2016> again to help you to find out which sports England and New Zealand won their medals for in the 2016 Olympic games.

England

Medal	Sports
Gold	
Silver	
Bronze	

New Zealand

Medal	Sports
Gold	
Silver	
Bronze	

Which sport would you say that England and New Zealand are the best at? Why do you think this?

Using the same website, I want you to find two records which each country has broken. Tell me which sport the record was for, who achieved the record and when.
