

**Scheme of Work 2020 – 2021 (HT3+4)**  
**Subject: A2 Chemistry**

**Year Group: 13**

**Specification: AQA 7405**

Lesson No	Topic & Objectives	Big Question – What will students learn?	Key Activities & Specialist Terminology (Do Now Task / Starter/Tasks/Plenary)	Planned Assessment	Homework or flipped learning resources  DODDLE resources	Lit Num SMSC Codes
<b>3.2.5 Transition metals</b>	<p>Give the electron structure of transition metals and their ions.</p> <p>Know the characteristic properties of transition metals.</p> <p>Understand the terms complex, ligand co-ordinate bond, and co-ordination number.</p>	<p><b>Students should be able to:</b></p> <ul style="list-style-type: none"> <li>write the electron structure of first row transition metals and their ions</li> <li>describe what a transition metal is in terms of electron structure</li> <li>describe the characteristic properties of transition metals</li> </ul> <p>define the terms ligand, complex, co-ordinate bond and co-ordination number</p>	<ul style="list-style-type: none"> <li>State the electron structure of first row transition metals and their ions (AO1 - Demonstrate knowledge and understanding).</li> <li>Explain why the elements Ti–Cu have properties characteristic of transition metals, and what those characteristics are (AO1 - Demonstrate knowledge and understanding).</li> <li>Identify the oxidation state of the metal, the ligands and co-ordination number in a series of complexes (AO2 - Apply knowledge and understanding).</li> </ul> <p>Identify an element from the series Ti–Cu and find examples for that element to confirm its characteristic properties (AO3 - Analyse, interpret and evaluate scientific information, ideas and evidence).</p>	<ul style="list-style-type: none"> <li>January 2005 Unit 5 Question 6a (QW05.5.06)</li> <li>June 2010 Unit 5 Question 4a and 4b (QS10.5.06)</li> <li>January 2011 Unit 5 Question 4a and 4b (QW11.5.04)</li> </ul>	<p><i>Chemistry Review</i> article: Vanadium (Volume 19, edition 4)</p>	C3
<b>3.3.9.2 Acylation</b>	<p>Draw the structure of and name acid anhydrides,</p>	<p><b>Students should be able to:</b></p> <ul style="list-style-type: none"> <li>draw the structure of and name acid anhydrides,</li> </ul>	<ul style="list-style-type: none"> <li>Students draw and name acid anhydrides, acyl chlorides and amides (AO2 - Apply knowledge and understanding).</li> <li>Students write equations and outline mechanisms for acylation reactions of</li> </ul>	<ul style="list-style-type: none"> <li>January 2012 Unit 4 Question 10a (QW12.4.10)</li> </ul>	<p>RSC resource on aspirin: <a href="http://www.rsc.org/learn-chemistry/resource/res0000056/aspirin">http://www.rsc.org/learn-chemistry/resource/res0000056/aspirin</a></p>	C3

	<p>acyl chlorides and amides.</p> <p>Understand acylation reactions of water, alcohols, ammonia and amines with acyl chlorides and acid anhydrides, including the mechanism for acyl chlorides.</p> <p><b>Required practical 10</b> Preparation of - a pure organic solid and test of its purity - a pure organic liquid.</p>	<p>acyl chlorides and amides</p> <ul style="list-style-type: none"> <li>• identify the products of and write equations for acylation reactions of water, alcohols, ammonia and amines with acyl chlorides and acid anhydrides</li> <li>• outline the mechanism for the acylation reactions of acyl chlorides</li> <li>• state advantages of using ethanoic anhydride rather than ethanoyl chloride in the production of aspirin</li> <li>• prepare and purify an organic solid and test its purity.</li> </ul>	<p>water, alcohols, ammonia and amines with acyl chlorides and acid anhydrides; some of these reactions could be demonstrated.</p> <p>Students prepare, purify and test the purity of aspirin by melting point determination (AO2 - Apply knowledge and understanding; AT d - Use laboratory apparatus for a variety of experimental techniques including distillation and heating under reflux, including setting up glassware using retort stand and clamps; AT d - Use laboratory apparatus for a variety of experimental techniques including filtration, including use of fluted filter paper, or filtration under reduced pressure; AT k.</p>	<ul style="list-style-type: none"> <li>• June 2006 Unit 4 Question 1 (QS06.4.01)</li> <li>• June 2005 Unit 4 Question 7 (QS05.4.07)</li> <li>• June 2003 Unit 5 Question 8b (QS03.5.08)</li> </ul>	<p>Aspirin Pre-lab Screen Experiment: <a href="http://www.rsc.org/learn-chemistry/resource/res00001644/aspirin-screen-experiment">http://www.rsc.org/learn-chemistry/resource/res00001644/aspirin-screen-experiment</a></p> <p>RSC mechanisms resource: <a href="http://www.rsc.org/learn-chemistry/resource/res0000638/curly-arrows-and-stereoselectivity-in-organic-reactions">http://www.rsc.org/learn-chemistry/resource/res0000638/curly-arrows-and-stereoselectivity-in-organic-reactions</a></p> <p>Mechanism animations <a href="http://science.jbpub.com/organic/movies/">http://science.jbpub.com/organic/movies/</a></p>	<p>C3</p> <p>C3</p> <p>C3</p>
--	---	--	---	--	---	-------------------------------

<b>3.3.10 Aromatic Chemistry</b>	Understand the structure of benzene and evidence for delocalisation.	<b>to:</b> <ul style="list-style-type: none"> <li>describe the structure of benzene and explain how delocalisation makes benzene more stable than the theoretical cyclohexa-1,3,5-triene</li> <li>use thermochemical evidence from enthalpies of hydrogenation to account for this extra stability</li> <li>explain why benzene undergoes substitution reactions in preference to addition reactions.</li> </ul>	<ul style="list-style-type: none"> <li>Name a range of aromatic compounds with common functional groups (AO2 - Apply knowledge and understanding).</li> <li>Draw enthalpy diagrams to show the relative stability of cyclohexane, cyclohexene, cyclohexa-1,4-diene, benzene and the theoretical cyclohexa-1,3,5-triene (AO2 - Apply knowledge and understanding).</li> </ul>	<ul style="list-style-type: none"> <li>June 2011 Unit 4 Question 8a (QS11.4.08)</li> <li>January 2004 Unit 4 Question 7a (QW04.4.07)</li> </ul>	<i>Chemistry Review</i> article: The structure of benzene (Volume 1, edition 1)  <i>Chemistry Review</i> article: Who discovered the structure of benzene (Volume 5, edition 1)	C3  C3
<b>3.3.13 Amino acids, proteins and DNA</b>	Understand the structure of amino acids.  Draw the structure of given amino acids in acidic solution, alkaline solution and as zwitterions.	<b>Students should be able to:</b> <ul style="list-style-type: none"> <li>draw the structure of given amino acids in acidic solution, alkaline solution and as zwitterions.</li> </ul>	<ul style="list-style-type: none"> <li>Given the structure of the amino acid, students show draw the structure of the species formed in acidic solution, alkaline solution and as a zwitterion (AO2 - Apply knowledge and understanding).</li> </ul>	<ul style="list-style-type: none"> <li>June 2013 Unit 4 Question 6 (QS13.4.06)</li> <li>January 2012 Unit 4 Question 7 (QS12.4.07)</li> <li>January 2005 Unit 4 Question 2 (QW05.4.02)</li> </ul>	Structure of amino acids (rotatable) <a href="https://undergrad-ed.chemistry.ohio-state.edu/jmol-viewer/#">https://undergrad-ed.chemistry.ohio-state.edu/jmol-viewer/#</a>  RSC resource on basic biochemistry <a href="http://www.rsc.org/Education/Teachers/Resources/cfb/proteins.htm">http://www.rsc.org/Education/Teachers/Resources/cfb/proteins.htm</a>	C3  C3
<b>3.3.13.2 Proteins</b>	Understand the structure of proteins.	<b>to:</b> <ul style="list-style-type: none"> <li>describe the primary, secondary and tertiary structure of proteins, including the importance</li> </ul>	<ul style="list-style-type: none"> <li>Draw the structure of peptides formed from joining amino acids together (AO2 - Apply knowledge and understanding).</li> </ul>	<ul style="list-style-type: none"> <li>January 2010 Unit 4 Question 6 (QW10.4.06)</li> </ul>	Structure of amino acids and proteins (rotatable) <a href="https://undergrad-ed.chemistry.ohio-state.edu/jmol-viewer/#">https://undergrad-ed.chemistry.ohio-state.edu/jmol-viewer/#</a>	C3

	<p>Understand how peptide links can be hydrolysed to release amino acids.</p> <p>Know how to use thin-layer chromatography to separate and identify amino acids.</p>	<p>of hydrogen bonds and S-S bonds</p> <ul style="list-style-type: none"> <li>draw the structure of peptides formed from amino acids</li> <li>know that peptide link can be hydrolysed producing amino acids</li> <li>identify the amino acids given when a peptide is hydrolysed</li> <li>know that amino acids can be separated and identified by thin-layer chromatography, including the use of <math>R_f</math> values.</li> </ul>	<ul style="list-style-type: none"> <li>Identify amino acids formed when peptides are hydrolysed (AO2 - Apply knowledge and understanding).</li> <li>Identify the primary, secondary and tertiary parts of the structure of some proteins (AO2 - Apply knowledge and understanding).</li> <li>Students can carry out some thin-layer chromatography of some amino acids to identify an unknown amino acid (AO2 - Apply knowledge and understanding; AT i - Use thin-layer or paper chromatography).</li> </ul>	<ul style="list-style-type: none"> <li>SAM A level Paper 2 Questions 5</li> <li>June 2011 Unit 4 Question 4c (QS11.4.04)</li> <li>January 2011 Unit 4 Question 4f (QW11.4.04)</li> </ul>	<p>RSC resource on basic biochemistry  <a href="http://www.rsc.org/Education/Teachers/Resources/cfb/proteins.htm">http://www.rsc.org/Education/Teachers/Resources/cfb/proteins.htm</a></p> <p>AQA Biochemistry Teachers' Notes (covers 3.3.13):  <a href="http://www.aqa.org.uk/resources/science/as-and-a-level/chemistry-7404-7405/teach/teaching-notes">http://www.aqa.org.uk/resources/science/as-and-a-level/chemistry-7404-7405/teach/teaching-notes</a></p>	C3
<b>3.3.13.3 Enzymes</b>	<p>Understand the structure of enzymes.</p> <p>Understand the action of enzymes in terms of active sites.</p> <p>Understand the principle of drug action and the use of computer aided design.</p>	<p><b>Students should be able to:</b></p> <ul style="list-style-type: none"> <li>explain that enzymes are proteins which act through a stereospecific active site that binds to a substrate</li> <li>explain how drugs, which can be designed with the aid of computers, can act to inhibit enzymes by blocking active sites, but that the correct enantiomer is required.</li> </ul>	<ul style="list-style-type: none"> <li>Use a right handed glove with their right/left hands to model enzyme action (AO2 - Apply knowledge and understanding).</li> </ul>		<p>RSC resource on basic biochemistry of enzymes  <a href="http://www.rsc.org/Education/Teachers/Resources/cfb/enzymes.htm">http://www.rsc.org/Education/Teachers/Resources/cfb/enzymes.htm</a></p> <p>Useful animations on action of enzymes (eg hydrolysis of sucrose)  <a href="http://doctorprodigious.wordpress.com/hd-animations/">http://doctorprodigious.wordpress.com/hd-animations/</a></p>	C3  C3

<p><b>3.3.13.4 DNA</b></p>	<p>Understand the structure of the components of DNA (given on data sheet).</p> <p>Understand the nature of nucleotides.</p> <p>Understand the structure of single DNA strands and the arrangement of these together in the double helix structure.</p>	<p><b>Students should be able to:</b></p> <ul style="list-style-type: none"> <li>• identify the components of DNA</li> <li>• explain how the two DNA strands interact with hydrogen bonds between base pairs.</li> </ul>	<ul style="list-style-type: none"> <li>• Make a 2D or 3D model of DNA using cut out components (AO2 - Apply knowledge and understanding).</li> <li>• Label a diagram of DNA to show the components and the hydrogen bonding between base pairs (AO1 - Demonstrate knowledge and understanding of scientific ideas).</li> </ul>	<ul style="list-style-type: none"> <li>• SAM A-level Paper 2 (set 1) Question 8</li> </ul>	<p>How Stuff Works on the structure of DNA  <a href="http://science.howstuffworks.com/life/cellular-microscopic/dna1.htm">http://science.howstuffworks.com/life/cellular-microscopic/dna1.htm</a></p> <p>Simple animation showing the structure of DNA:  <a href="http://www.youtube.com/watch?v=qy8dk5iS1f0">http://www.youtube.com/watch?v=qy8dk5iS1f0</a></p> <p>Useful animations on biochemistry  <a href="http://doctorprodigious.wordpress.com/hd-animations/">http://doctorprodigious.wordpress.com/hd-animations/</a></p> <p><i>Chemistry review</i> article: Why is DNA helical? (Volume 1, edition 1)</p>	<p>C3</p> <p>C3</p> <p>C3</p> <p>C3</p>
<p><b>3.3.13.5 Action of anti-cancer drugs</b></p>	<p>Understand how DNA replicates and how anti-cancer drug cisplatin prevents this.</p>	<p><b>Students should be able to:</b></p> <ul style="list-style-type: none"> <li>• describe how DNA replicates in simple terms</li> <li>• explain how the anti-cancer drug cisplatin prevents DNA replication</li> <li>• explain why some drugs can have adverse effects and appreciate the balance between benefits and adverse effects of any drug.</li> </ul>	<ul style="list-style-type: none"> <li>• Write notes to accompany a sequence of diagrams showing DNA replication (AO1 - Demonstrate knowledge and understanding of scientific ideas).</li> <li>• Write notes to accompany a diagram showing the action of cisplatin (AO1 - Demonstrate knowledge and understanding of scientific ideas).</li> <li>• Evaluate the benefits and adverse effects of using drugs such as cisplatin (AO3 - Analyse, interpret and evaluate scientific information).</li> </ul>	<ul style="list-style-type: none"> <li>• SAM A-level Paper 2 (set 1) Question 8</li> </ul>	<p>Useful animations on biochemistry (DNA replication)  <a href="http://doctorprodigious.wordpress.com/hd-animations/">http://doctorprodigious.wordpress.com/hd-animations/</a></p> <p>Youtube video on action of cisplatin  <a href="http://www.youtube.com/watch?v=Wq_up2uQRDo">http://www.youtube.com/watch?v=Wq_up2uQRDo</a></p>	<p>C3</p> <p>C3</p>

					<p>Cisplatin – molecule of the month  <a href="http://www.chm.bris.ac.uk/motm/cisplatin/html/only/">http://www.chm.bris.ac.uk/motm/cisplatin/html/only/</a></p>	C3
